Subject: What's in your food?

Dear Corporate and Government Leaders,

Genetically engineered food ingredients or crops should not be allowed on the market until:

- 1) Independent safety testing demonstrates they have no harmful effects on human health or the environment,
- 2) They are labeled to ensure the consumer's right-to-know, and
- 3) The biotechnology corporations that manufacture them are held responsible for any harm.

I do not think that we should be altering our foods. These things were made perfect by our maker and if we mess with them we are making them unperfect. Humans cannot improve these thin

Sincerely

Judith Simon
